Dixie Super Windows Help Advance Energy Conservation

(Atlanta, GA) February 17, 2009 – As one of the fastest growing home improvement companies in America, Dixie HomeCrafters is proud to offer homeowners a new product to advance energy conservation. Dixie HomeCrafters' Super Windows are engineered and built to give homeowners the highest possible thermal performance. They allow you to stay cooler in the summer, warmer in the winter and enjoy significantly lower energy bills.

"Dixie Super Windows offer easy operation and exquisite beauty," says Hugh Harris, CEO of Dixie HomeCrafters. "They don't require maintenance to keep them working and looking great for decades."

Dixie's Super Window features America's premiere triple-insulating glass system. This includes three panes of glass with the industry's most technologically advanced low-emissivity coating, which is applied to two glass surfaces - the PPG Intercept® spacer system and a mix of Krypton and Argon gas between the panes. All Super Windows are ENERGY STAR® labeled as well.

"This is a product that can save you significant amounts of money over time," Harris says. "Not only will it create a more comfortable home, but it is guaranteed to save you 40 percent on your energy bills."

About Dixie HomeCrafters:

Dixie HomeCrafters is a home improvement company specializing in vinyl siding, replacement windows and clog-free gutters. They offer installation by trained, insured crews, done to the highest standards of the industry. Dixie HomeCrafters also offers Diamond Barrier™, a state-of-the art reflective insulation product that blocks radiant heat from home attics. Based in Atlanta since 1991, Dixie HomeCrafters has been ranked in the top 10 of replacement companies in the nation by *Replacement Contractor* magazine.
